CSCI 3308 Final Submission

Title: Recipist: Recipe searching, by ingredient!

Who: [Name] – [Github account]

Sage Thomas – ScienceSage

Burak Karaoglu – mbkaraoglu

Amulya Srivastava – amsr2031

Victoria Soesanto – viso4661

Qiu Duan – qidu0919

Project Tracker: Github Issue Tracker

https://github.com/ScienceSage/Recipist/issues?q=is%3Aissue+is%3Aclosed

Video of Android App: https://youtu.be/_tdKfZUoPWQ

VCS Repository: Github; https://github.com/ScienceSage/Recipist

Each member's contributions:

Burak worked on the API, Amulya worked on the database, Sage worked on the web app, web crawler, and database builder, Qiu and Victoria worked on the Android app.

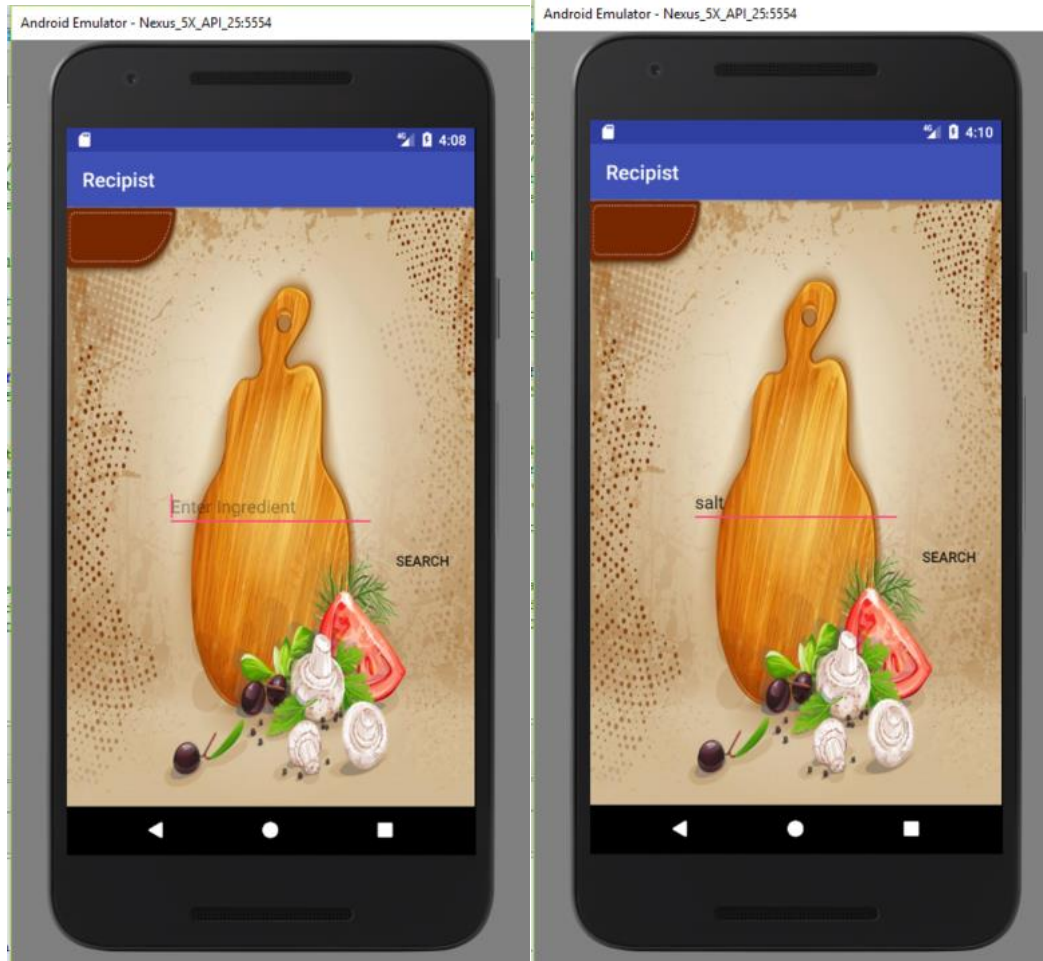

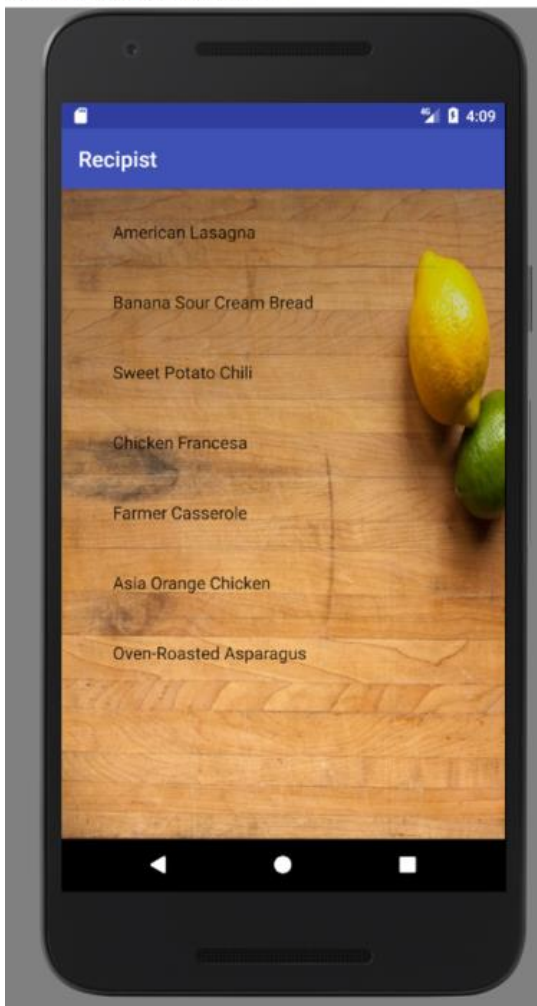

Deployment:

Web App: https://recipist-site.herokuapp.com/

Web API: http://recipist-csci3308.herokuapp.com/search?ingrds=salt,butter
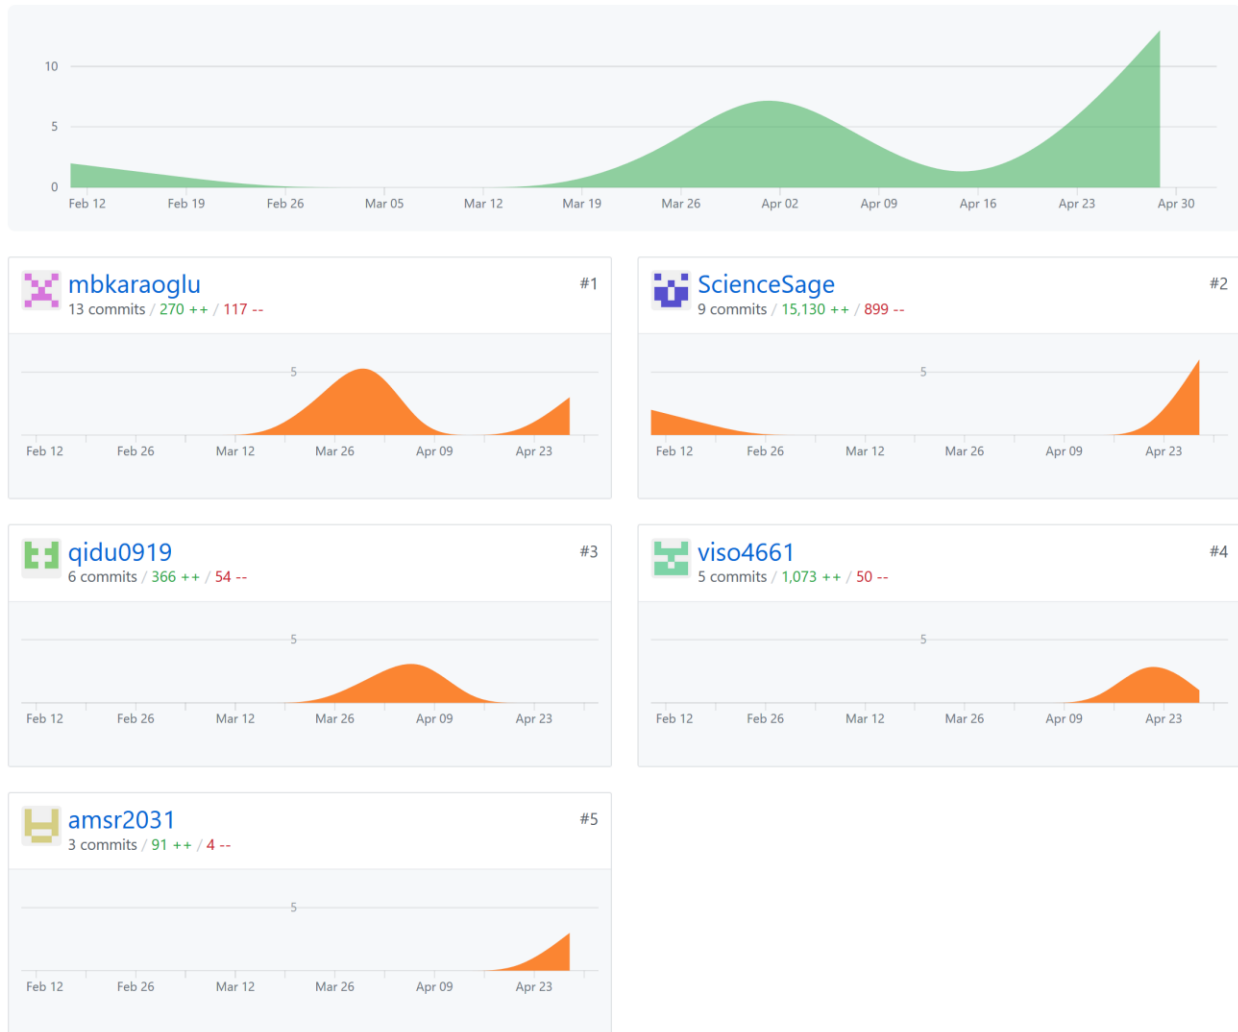

Android App: See the video above. We don't currently have an easy way to play with this besides cloning the source code and building it on your own machine. Here are some screen shots, also.

Auto-doc:

Much of our code was written in Ruby and Python so there is no good auto-documenter for those languages, but we still commented all our code.
